Git/Github
Good knowledge of Local Storage, Staging Area, Local Repository, Global Repository, Cloning and Branches.

Html and Css
Good knowledge of flex, grid, inline CSS, internal CSS and external CSS,bootstrap-5

PROJECTS

R-Ecommerce,
E-commercial Project Using servlet and hibernate 🔗
In this Project, I have used **Eclipse-ide** to build an application i.e. based on the web application. By using the concepts of servlet, JSP and Hibernate I have built a web application based on e-commercial and in this project, we have three modules Admin, Merchant and Customer. Customers can buy products from our application. this project is continuing for further developments.

RFC-Corner, Spring Project 🔗
Project I have built this by observing how the orders are processed in KFC/Domino's. I have used Spring framework(Spring MVC) to handle the back-end part and for the front-end, I have used HTML, CSS and BootStrap-5. Two modules are Admin and Customer, Admin can add foods and also, he can log in with the Customer details so that this customer can able to order food. Now Customers can order food from the Admin and I am continuing with that Customers can order food by themselves by logging in and that order will sent to the Admin with the table number, this project is continuing for further requirements.
